Artificial Intelligence in Rail Flaw Detection

Sperry Rail has developed a first-of-its-kind artificial intelligence (AI) solution that overcomes existing RFD limitations to drive safer, faster, more reliable, and cost-effective RFD programs.

Attendees will discover how Sperry's integrated advanced data management tools driven by artificial intelligence:

Analyze and prioritize data for further analysis and verification

Automatically match previous runs over the same track and continually synchronize along the run to fractions of an inch

Provide the most comprehensive rail condition data to optimize maintenance decision-making
